

## Time to Upgrade Your Factory System? Alpine Has All the Right Answers.

No matter how you want to improve and expand your factory system, Alpine has the answer: use your iPod and Bluetooth phone, add audio and video sources, improve the sound of your system, get the convenience of a drive assist camera, and more.

We offer a large variety of custom-tailored solutions:

- Listen to your iPod and get hands-free calling with your Bluetooth mobile phone via your factory radio with the same superb controls as on your iPod. All you need is the eX-10 iPod Controller.

- Enjoy iPod video playback with convenient control via your Mercedes, Porsche or Rover factory display. Just use one of our Multi Media Interfaces with DVD Controls (i.e. APF-M211ME, -M211PO, -M211RO) and the KCE-425i video interface for iPod.

- Bring your outdated BMW system into the 21st century with digital TV, DVD/MP3/AAC playback, and one of the market's most powerful navigation systems that gives you guidance commands and splash screens with intersection zoom in any mode, even while listening to radio via the factory system. Expand your system with the TUE-T150DV, DHA-S690, NVE-N099P, KCE-211B and VPA-B211P.

- You are not too impressed with your multi-channel sound system? The PXE-H650 will sum up channels, clean the signal from all factory programmed equalisation, and overcome the acoustic limitations of the in-car environment with Alpine's IMPRINT technology.

- Tired of twisting your neck and still having difficulty manoeuvring in tight places? Add an Alpine HCE-C200R Rear Camera System, plus an HCE-C200F Front Camera for peeking around corners when pulling out of small alleys.

Advanced acoustic correction and precise signal processing that cancels out in-car distortions— restoring the sound and improving the performance of any factory audio system.

## PXE-H650

### SYSTEM INTEGRATION AUDIO PROCESSOR

- Advanced factory audio system integration and tuning processor • High/Low level, Auto-Ranging & Auto-Summing input • 24-Bit DAC • AntEQ sound correction • Audyssey MultEQ XT sound optimisation
- Time Correction, Phase Correction, Parametric EQ & HP/BP/LP/Subsonic filters

#### All-in-one Solution

In the past, upgrading a factory radio to make a top-notch system required three devices: a level converter, a processor to cancel the factory settings, and another processor to make new settings. The PXE-H650 does all of those jobs AND vastly improves the sound quality, all at an inexpensive price.

#### Connects to Any Factory Radio

Processing the factory radio signal requires conversion of the signal, a potentially complicated process. The PXE-H650 is capable of handling a wide range of input levels, from speaker level to preamps, allowing you to easily connect to any factory radio system.

#### Calibration Kit

The core of Alpine's IMPRINT technology is Audyssey MultEQ, a sophisticated processing system that corrects the acoustical problems in the car that conventional processors can't fix, for professional sounding clarity and imaging.

#### Awesome Result in Minutes

Even with its ultra-sophisticated technology, the PXE-H650 is remarkably easy to use. It perfectly tunes the sound in your car so it seems as if a professional spent days working on it, yet you can achieve this awesome sound in just minutes.
